WE PROTECT THOSE WHO PROTECT US!

This has been our guiding principle for over 30 years in our product development and services. Our products are developed by professional advice and our experienced expertise. We strive to tailor our products to meet the needs of each individual customer.

Our EKA - CAMLOCK® baton, has set the worldwide standard for expandable batons. The durability and reliability are unmatched compared to the competition.

Even 16 years after its market launch, the EKA is still highly sought after by professionals worldwide.

MULTIBRIDGE

The MULTIBRIDGE efficiently merges three means of intervention into one. Baton, pepper spray and tactical flashlight. The clever combination increases self-protection and provides several means for de-escalating almost any situation.

With the exception of the 16" baton, all Bonowi EKAs can be retrofitted with the MULTIBRIDGE.

STOP STICK USA

With the acquisition of Stop Stick Ltd., based in Cincinnati/Ohio, we offer the world's leading tire-deflation device used by law enforcement to safely and quickly end high-speed automotive pursuits. More than 300,000 police vehicles are equipped with Stop Stick® devices which are proven to deflate tires on any vehicle from small

cars to tractor-trailers. In the last 20 years, law enforcement officers have successfully ended over 30,000 vehicle pursuits in all 50 states and abroad using Stop Stick® devices.

PITAGONE – The mobile road barrier.

Unfortunately, the past has taught us that vehicles can be used as weapons. Public events need to be secured. Pitagone's mobile road barrier system is a modular and easy-to-transport barrier system that can withstand the impact forces of a truck and is suitable for all road surfaces and ground conditions. As a building block of an effective safety concept, the Pitagone mobile road barrier system makes a reliable contribution to public safety.

BONOWI IS EXPANDING

We distribute our products to over 40 countries around the world and have partnered with numerous armed forces and police agencies.

In addition to our „off the shelf“ products, we offer customized solutions for our customers.

BATONS

EKA – CAMLOCK®

A true market leader in the worldwide baton market, the Bonowi EKA stands out in a crowded field. Increasing attacks on police officers, resistance during arrests, and general aggression during police interventions necessitate situation-adapted methods of intervention.

The EKA baton seamlessly closes the existing gap between simple physical force and the use of firearms. Bonowi offers a user-oriented and practice-related training program.

We have designed the multiplier training program, in which the behavior and use of the baton are trained and memorized for use in an emergency.

Our research has shown that in real operational situations, when the EKA is presented, together with a clear speech, approx. 75% of all aggressive actions can be stopped without further use of force.

MULTIBRIDGE

Multibridge

The Multibridge uses a specially designed 20 ml pepper spray cartridge. According to the techn. guidelines for the German police (RSG6). The cartridge sprays a pinpoint, ballistic liquid jet, that is capable of up to 8 sprays of 0.5 seconds duration, at a range of approximately 4 to 5 m. The special filling technology allows you to spray 360° in any position, even overhead. Designed for one-hand operation - unlock and trigger with your thumb. Multibridge comes with an additional rechargeabl tactical light module that produces 600 ANSI lumens with three levels of brightness.

RESTRAINT SYSTEMS

Captivation???

Officer's personal protection is the highest priority in the line of service. For this reason, the highest demand on a handcuff is to ensure safe and easy handling in an emergency.

In order to optimally meet all operational requirements, we have developed a handcuff that sets new standards. The Trilock is manufactured using the MIM (Metal Injection Moulding) process and was designed using real-world feedback and experience from law enforcement and service members.

The result is a device which, thanks to its geometry and construction, enables the user to put on the handcuff dynamically and intuitively in all positions (even in the dark). The double lock was designed in such a way that it can also be operated with gloves without any problems.

Trilock Handcuff

The Trilock handcuff is suitable for any wrist size. The triple locking mechanism prevents unintentional tightening. The locks can be opened on both sides, making it easier to put on and take off. The complete stainless steel housing is durable, acid-resistant and anti-allergic. Trilock is also available as a chain version with 2 or 4 links.

Universal Key

Article No. 05100020000

Restraint belt

The restraint belt uses a body belt system with Bonowi handcuffs and a double safety device to secure and restrain extreme offenders. The handcuffs can be released via safety straps, and in case of resistance, the handcuff can be immediately pulled back to the body of the restrained person and locked in place. Additional foot loops can be added depending on the application and are included in the scope of delivery. The restraint belt can also be equipped with our Bonowi Trilock handcuff on request.

Deportation Belt

Article No. 05130007000

Deportation belt

The Bonowi deportation belt was developed based on a shackle belt. It secures and restrains persons during deportations or offenders during medical examinations. The Velcro cuffs can be released in a controlled manner using the safety straps to give the person some room to move. An additional foot restraint with variable adjustment can be added depending on the application and is included in the scope of delivery. The deportation belt was developed for humane restraint during deportations and meets the required self-securing measures.

The restrained person must not be unsupervised at any time in order to be able to intervene immediately in the event of external or auto-aggressive actions.

Restraint bag

For added security during transport and custody of dangerous offenders. The restraint bag is inserted over the hands secured with handcuffs and prevents any manipulation.

Restraint Bag

Article No. 05130003000

Trilock Flex

An improvement upon the disposable handcuff, the Trilock Flex, is designed to be reused and more cost effective. The Trilock Flex uses a TRILOCK key and a triple tumbler analogous to Bonowi® TRILOCK restraints. The straps are made of highly tear and abrasion resistant fabric which can be disinfected if necessary, or easily replaced. The lock is made of plastic and metal for extreme durability. Additionally The textile straps, can be double or single looped.

BALLISTIC PROTECTIVE BLANKETS

AirFrame

The Air Frame is bullet-resistant blanket that can be folded or rolled up for easy transportation and deployment. The AirFrame features an integrated inflatable chamber system, which can be inflated using CO2 cartridges to stabilize the blanket. The inflatable system also provides protection against trauma in the event of a bullet or impact.

The ballistic package is certified according to German protection level 1 or VPAM 3 or 4 (on request also according to US protection level NIJ-III A).

The AirFrame can be worn as a full body shield, or it can be combined and connected to other blankets at the sides. Additionally it can also be used as a temporary rescue and recovery stretcher. The ballistic insert is sealed to be waterproof, and the rugged, tear-resistant, and outer shell is machine washable. The entire blanket cover can be rolled up and conveniently transported in a special carrying bag with backpack function.

Specs:

- Depending on size and ballistic Package weight is between 6–8 kg
- Upgradeable with additional ballistic plates up to SK4+

FlexShield	60 x 60 cm
Article No.	on demand

FlexShield

The FlexShield is an ideal backup protection system. As a ballistic supplement. The „FlexShield“ comes with a soft ballistic high-performance package, with an integrated inflateable chamber system that can be stabilized using a CO² cartridge. The FlexShield is designed to be worn like a protective shield. Unlike our AirFrame protective blankets, the FlexShield uses a much flatter inflation bead with a smaller cartridge. Designed to be small enough to fit in front of the passenger seat and inflated between the car door and seat.

Optionally, the FlexShield can be upgraded with panels to a higher protection class. For example, to VPAM 6 (plus 2 x 2kg for the entire surface).

- Small pack size and weight.
- Almost complete coverage of the upper body from chin, arms up to and including the abdomen.
- Perfect flexibility is maintained even when inflated.

BALLISTIC PROTECTION

Plate carrier for VPAM 6 or VPAM 9 / Stand alone or ICW

Plate carrier made of highly durable nylon fabric. The interior is made of breathable spacer fabric with additional removable washable pads (according to care instructions). The pads increase comfort and also allow additional air circulation behind the plate carrier.

A rescue loop is located at the upper back, which is concealed in a pocket. Front, back and side areas are equipped with a Molle system.

The plate carrier is a universal size and can be easily adjusted to fit any carrier in the shoulder and side areas by adjusting the Velcro/fleece fasteners. On the side of the waist belt is a pocket to hold side plates.

Plate carrier Quick Release

The plate carrier is made of highly durable nylon fabric. It is lightweight, comfortable and extremely safe. All models in this series also feature a Quick Release System, which can also be used to adjust to the individuals size.

For increased comfort and optimal air circulation, this high-quality carrier is equipped with a padded shoulder, chest and back section made of 3D mesh fabric.

The MOLLE system offers a variety of fastening options for deployment equipment. There is a 4-row Velcro area on the chest and back for attaching labels. A recovery loop is also included for recovery operations..

To increase durability, the Carrier intentionally omits vulnerable plastic parts or rubber inserts.

The front- and rear-mounted compartments for ballistics allow a quick and uncomplicated exchange of the inserts:

The materials and processing above plate carriers are made according to military guidelines: TL Bw or US Mil-Specs. Extensive accessories and bags are available separately. Other plate sizes and colors available on request or as part of a custom design.

Bonowi Flank protection vest

The Flank protection vest is designed to protect the area under the armpits open by a normal ballistic vest, whether under or over.

It is designed to be worn under the normal vest and thus does not affect the user's freedom of movement.

The elastic mesh fabric, makes the vest very easy to wear and fits comfortably to the body.

The flank protection vest provides excellent protection for previously unprotected areas that have already caused fatal injuries to emergency personnel.

Material:

- base fabric: elastic mesh
- color: black
- Sizes: S-3XL

- Unisex
- Mesh lining inside flank:
- COOLMAX® Soft, elastic lining that cools in warm temperatures and provides light insulation in cold. It is also breathable and quick drying

Fixing the ballistics

The ballistic package is fixed at the optimum wearing height by the wearer via a Velcro/fluff connection when

donned. Thus, the safety-relevant body parts are protected throughout, since slipping can be excluded, as well as the wearing comfort is significantly increased.

The Velcro fleece connection runs from the front to the back on the inside of the shoulder.

STOPPING SYSTEMS

Stop Stick Rack Kit Road Coverage

Stopping fleeing motor vehicles is often associated with considerable risks for the police officers involved, uninvolved third parties and the fleeing vehicle. Stop Stick® can be used quick safe and effecticly: whether stopping a fleeing vehicle or setting up a roadblock Stop Sticks can be deployed in a matter of seconds.

When driven over, Teflon-coated carbide quill penetrates the tread, and de-flates the tire on average taking twenty to thirty seconds. The vehicles remain true to track and can be safely brought to a standstill.

- The plastic sheathing protects the emergency personnel from injuries during operation.
- The 24 m nylon cord allows responders to stay a safe distance from the road.
- Designed to deflate tires in a controlled manner.
- No dangerous objects remain on the road after crossing! The system can be removed from the road immediately after the target vehicle, so that there is no danger to the following traffic.

Stop Stick sets:

- RACK I: Three Stop Sticks and one spare stick, each about 100 cm long.
- RACK II: Four Stop Sticks and one spare stick, each about 100 cm long.
- With carrying bag, line spool, 24 m braided nylon line, 54 kg tensile force.
- Tear-resistant nylon cover - 3 m long,
- double stitched nylon construction.

Stop Stick training kit

- Made of foam with equal weight
- Three Stop Sticks and one spare stick, each about 100 cm long.
- Includes carrying case, line spool, 24 m braided nylon line, 54 kg pull.
- Tear-resistant nylon cover - 3 m long, double-stitched nylon construction.

Training kit

Article No. 10130006000

Stop Stick Terminator

Reliable and reusable. The individual quill and shroud can be replaced after use. Originally developed for US Customs, the Terminator provides additional control at checkpoints, security areas, traffic stops, alcohol checks, surveillance, drug raids, warrants and other situations.

Designed for securing vehicles - Terminator also can be thrown directly in front of a vehicle, double-sided roll caps ensure that the terminator comes to lands on the correct side.

Stops pursuits before they begin, saving lives and reducing property damage. Plastic housing keeps officers safe during operations. Designed to deflate tires in a controlled manner without blowing out. Teflon-coated carbide tubes act as valves and release air at a safe, controlled rate. No residue is left on the road surface.

Deflates tires on virtually all vehicles, including cars, buses and semi-trucks. Weather resistant and long lasting. Works on virtually all surfaces.

Stop Stick Barracuda

Heavy-duty tire release and multi-purpose barrier strip. Barracuda can be used again and again due to replaceable quill cartridges. Prevent vehicles from entering cordoned-off areas. Barracuda can quickly and safely deflate the tires of cars, trucks, buses and semi-trucks, allowing quick and easy cordoning off of areas to restrict entry and exit or control traffic flow.

Stops chases before they begin, saving lives and reducing property damage. Plastic housing keeps officers safe during operations. Designed to deflate tires in a controlled manner without blowing them open. Teflon-coated carbide tubes act as valves and release air at a safe, controlled rate. Saves time-consuming, costly and potentially dangerous repairs to the bleeding system. No residue is left on the road surface.

Deflates tires on virtually all vehicles, including cars, buses and semi-trucks. Weatherproof and durable. Works on virtually all surfaces.

Stop Stick Piranha

Convenient, concealed use. Reliable and reusable. Built to perform and last. Piranha is a compact, easy-to-use and highly effective deployment tool for deflating tires. It provides additional control during operations where people are expected to flee, such as searches, SEK operations and vehicle checks. If someone tries to drive away the target vehicle, the tire deflates in 5 seconds or less. At just over 8.9 cm long and weighing only 147 grams, Piranha takes up little storage space, yet offers significant benefits - it stops pursuits before they begin.

Stops pursuits before they begin, saving lives and reducing property damage. Plastic housing ensures officer safety during operations. Designed to safely deflate any tire in 5 seconds or less without the risk of a blowout. No residue is left on the roadway. Fits in glove box or under seats.

Works on virtually any surface. Rugged, weatherproof construction with durable plastic housing. Can be used on all vehicle axles.

TRAINING

X-TREM Real training pad

The X-TREM Real training pad was specially developed for EKA training, slightly rounded in sandwich construction with integrated PC plate for maximum shock absorption and energy distribution. The curved shape provides extra protection in case of blows in the peripheral areas. Horizontally and vertically arranged support handles make the pad ideal for all training situations.

The exchangeable front can be replaced easily and quickly and is available as a replacement accessory. This makes the X-TREM REAL impact protection pad extremely durable and economical.

3rd Generation Color Marking Helmet

The Bonowi color marking helmet provides protection for the entire head. The plastic top with many openings guarantees proper ventilation. The helmet offers a wide field of vision, providing the best overview during any scenario. Other features include integrated soft ear protection, a visor, and friend/foe markings.

- 180° degree field of view
- anti-fog visor
- lightweight and fully flexible
- highest wearing comfort
- very good communication

The helmet is supplied by Bonowi® with an adaptable neck guard, inner pads, as well as an outer shell that blocks the penetration of paint. The helmet has also been tested with machine gun fire. Additionally, the goggles meet the firing protocol standards of the firing office in Mellrichstadt.

SV Armor Guard – full protection suit

This high-quality full protection suit made of Cordura and was developed in cooperation with SV specialists. We use as impact protection Suprotec foam and 2 mm PE (polyethylene) for extreme shock absorption, which provides excellent cushioning with maximum freedom of movement. Extra long Velcro straps allow for variable size adjustments. The fine adjustment of the size is made using the connecting straps of the individual parts. The head protection is adjustable at the top and back of the head. The field of vision is protected by a shatterproof plexiglass screen.

The full protective suit consists of the following individual parts:

- Head protection
- Chest protector
- Groin protector
- Upper arm and forearm protection
- Thigh and shin protection
- Color: black, one size

CAMERA SYSTEMS

Throwbot 2

The THROWBOT 2 (TB2) is a throwable micro-robot that provides emergency responders with instant video reconnaissance in indoor and outdoor environments.

In the field, it can be controlled to move silently through a building and transmit real-time video and audio to the user's control unit (OCUIII).

These reconnaissance features can be used to locate and identify suspicious persons or possible hostages, as well as to explore the premises.

When used in conjunction with the Recon Scout SearchStick, responders can transform the

THROWBOT 2 unit into a versatile baton camera. This facilitates the inspection of attics, roofs and crawlspaces.

Specs

- Indoor: tested up to 45 meters
- Outdoor: tested up to 137 meters
- Runtime: 110 minutes typical use / 160 minutes in observation mode
- Weight: 600 grams
- Length: 21.1 cm, Width: 20.1 cm, Height: 11.4 cm

**THROWBOT 2 with S-wheels
for flat terrain/indoor**

**THROWBOT 2 with M-wheels
Standard delivery**

**THROWBOT 2 with XL wheels
for difficult terrain**

- The TB2 system includes the THROWBOT 2 micro-robot and the control unit II (OCU II I)
- Withstands repeated falls from a height of 9 m..
- Equipped with an infrared optical system that switches on automatically when the ambient light is weak. Video and audio is transmitted at a distance of up to 45 m through walls, windows and doors to the OCU III control unit.
- The robot has various predefined frequencies. This enables the simultaneous use and operation of several THROWBOT units in the same environment.
- Uses standard USB Type C charger and can optionally be equipped with different wheels.
- THROWBOT XT, Recon Scout XL and Recon Scout CT customers can upgrade the robot and use it with the current OCU III.

Zistos portable video systems

The Zistos telescopic camera system is used by specialized emergency forces in the context of self-protection, among other things:

- For reconnaissance and penetration of buildings and rooms
- For covert reconnaissance of dangerous situations,
- For identification and observation of target persons,
- Works in light and low light conditions

Zistos telescopic video camera equipment is a portable video observation system. The equipment allows the user to view rooms while at a safe distance by means of camera mounted telescopic pole. Different length telescopic poles (30 cm to 12 m) are available for this purpose. The camera heads can be partially (depending on the telescopic pole used) adjusted in their orientation (right/left, up/down) during use with a mechanism at the lower end of the pole.

The images captured by the camera is dis-

played on an accompanying monitor. In case of insufficient lighting, the camera heads are equipped with a white light as well as a thermal imaging camera head with IR function, which displays heat signatures and can also be used in case of smoke or dust development, are available in HD or SD.

The modular design of the equipment allows flexible adaptation in any condition, as well as rapid replacement of individual modules in the event of damage.

All components are weatherproof and waterproof, and come with waterproof cases as well as a weatherproof carrying bag for the telescopic poles.

When used in conjunction with the Recon Scout SearchStick, responders can transform the THROWBOT 2 unit into a versatile baton camera. Providing addition assistance for inspecting attics, roofs and crawlspaces.

Request a free trial to learn more about the modular system's versatility.

The WalkAbout® III is a battery-powered, rugged, weatherproof video monitor. The high-resolution 14-centimeter color screen is easy to read even in sunlight and provides maximum image detail and clarity under all operating conditions. The WalkAbout® III is compatible with and can be operated with all Zistos® cameras, poles, cables and accessories.

Zistos Accessories

The Zistos system offers 12 HD camera heads, as well as 10 SD camera heads, to ensure you will find the right extension for every application.

Designed for tactical surveillance applications, the Zistos StealthSCOPE™ is a video endoscope that combines a powerful internal 980 nm IR laser light source - completely invisible to humans - with electronically enhanced low-light video processing. With a diameter of 9 mm, it can be inserted into small openings and confined areas. It can produce images of objects and people at a distance of more than one meter in complete darkness.

This innovative, battery-powered device has an integrated, high-resolution monocular video display and is fully self-contained. It features a four-way pivoting tip and a submersible, semi-rigid, form-fitting guide tube that makes it easier and safer than ever to see around corners, over walls, under doors and in vents and ceilings.
