

AirFrame Ballistic Protection Shield

The AirFrame is a bullet-resistant structure in the shape of a blanket that can be folded or rolled up. On the rear side of the blanket, an integrated compartment system can be inflated by means of pre-installed pressure cartridges. The inflated compartments have a stiffening effect on the bullet-resistant shield, similar to an air mattress. Besides stiffening the structure, the inflatable system also provides trauma protection in the event of shots or clubbing.

The ballistic package is certified to German SK1 or VPAM 3/4 protection levels (U.S. protection level NIJ-IIA upon request).

Features

- 6 to 8 kg, depending on size and ballistic package
- Progressively upgradable to SK4+ with panels

Dimensions:

- AirFrame 15": 150 x 80 cm
- AirFrame 16": 165 x 80 cm
- AirFrame 18": 180 x 80 cm

The AirFrame can be worn as a full body shield and overlapped or extended sideways with further shield units. Peripheral straps enable safe wearing. It can also serve as a temporary rescue stretcher.

The ballistic insert is sealed against ingress of water. The rugged, tear resistant outer envelope is detachable and machine-washable. Reflecting police signage can be attached to the attack side. The protective shield can be rolled up and conveniently transported in a special carrying bag.
