

COLOR MARKER HELMET

4. Generation

The color marking helmet 4th generation offers the usual wearing comfort combined with protective performance and ventilation. We have also retained the proven Spectra 290° thermal lens system, which ensures a perfect field of vision in all situations.

With the introduction of the mid-range weapons and the associated training with the 4.6 mm MMR ammunition, it was necessary to revise the existing system. Especially in the chin area there was a danger that projectiles could break through the lamellas.

The 4th generation helmet is now equipped with a mandible made of polycarbonate, which meets exactly these requirements. With an additional perforation in the front area, it is ensured that under load the shock breathing is well dissipated, but the holes are small enough to prevent the projectile from entering or penetrating. The Mandibel can be retrofitted to existing 3rd generation helmets, thus restoring optimal and up-to-date protection.

Features:

- 180° degree field of view
- anti-fog visor
- lightweight and fully flexible
- highest wearing comfort
- very good communication

Specialities:

The helmet is supplied by us with an adaptable neck guard, inner pads, as well as an outer shell. This blocks the penetration of paint. The helmet has also been tested with machine gun fire. For the goggles there is a firing protocol of the firing office in Mellrichstadt.

Item-No.	Description
14130001000	Bonowi Color Marker Helmet 4. Generation
14130004000	Visor
14130009000	Accessories set, three-parts
